

`\smallskip`

`\medskip`

`\bigskip`

These commands produce successively larger amounts of vertical space:

<u>smallskip</u>	<u>medskip</u>	<u>bigskip</u>
_____	_____	_____

`\smallskip` skips by 3 points and can stretch or shrink by 1 point. `\medskip` is equivalent to two `\smallskip`s and `\bigskip` is equivalent to two `\medskip`s.

These commands end a paragraph since they are inherently vertical. The skips that they produce are in addition to the normal interparagraph skip.

Example:

Hop `\smallskip` skip `\medskip` and `\bigskip` jump.

produces:

Hop

skip

and

jump.
