

`\fmtname`

`\fmtversion`

These commands produce the name and version number of the T<sub>E</sub>X format, e.g., plain T<sub>E</sub>X or L<sup>A</sup>T<sub>E</sub>X, that you're using. The `\fmtversion` string contains a long list of supported languages, so is omitted here.

*Example:*

This book was produced with the `\fmtname\` format.

*produces:*

This book was produced with the eplain format.
