

`\displayindent` [ *dimen* parameter ]

This parameter specifies the space by which T<sub>E</sub>X indents a math display. T<sub>E</sub>X sets the value of `\displayindent` when it encounters the ‘`$$`’ that starts the display. Usually this initial value is zero, but if the paragraph shape indicates that the display should be shifted by an amount *s*, T<sub>E</sub>X will set `\displayindent` to *s*. See pages 188–189 of *The T<sub>E</sub>Xbook* for a more detailed explanation of this parameter.
