

hbox

1

hbox. An *hbox* (horizontal box) is a box that T_EX constructs by placing the items of a horizontal list one after another, left to right. An hbox, taken as a unit, is neither inherently horizontal nor inherently vertical, i.e., it can appear as an item of either a horizontal list or a vertical list. You can construct an hbox with the `\hbox` command (p. ‘`\hbox`’).
