

`\mathcode`  $\langle charcode \rangle$  [ $\langle number \rangle$  table entry]

This table entry contains the mathcode of the character whose ASCII code is  $\langle charcode \rangle$  (see “mathcode”, p. ‘`mathcode`’). The mathcode specifies that character’s interpretation in math mode.

*Example:*

```
\mathcode\> = "313E % as in plain TeX
% The > character has class 3 (relation), family 1 (math
% italic), and character code "3E
```
