

\break

This command forces a line break. Unless you do something to fill out the line, you're likely to get an “underfull hbox” complaint. **\break** can also be used in vertical mode.

Example:

```
Fill out this line\hfil\break and start another one.\par
% Use \hfil here to fill out the line.
This line is underfull---we ended it\break prematurely.
% This line causes an ‘underfull hbox’ complaint.
```

produces:

```
Fill out this line
and start another one.
This      line      is      underfull—we      ended      it
prematurely.
```
