

`\arrowvert`
`\Arrowvert`
`\lmoustache`
`\rmoustache`
`\bracevert`

These commands produce portions of certain large delimiters and can themselves be used as delimiters. They refer to characters in the `cmex10` math font.

Example:

```
$$\cdots \Big\arrowvert \cdots \Big\Arrowvert \cdots
\Big\lmoustache \cdots \Big\rmoustache \cdots
\Big\bracevert \cdots$$
```

produces:

$$\cdots \Big| \cdots \Big\| \cdots \int \cdots \Big) \cdots \Big| \cdots$$
