

`\ifodd` $\langle number \rangle$

This command tests if $\langle number \rangle$ is odd. Before performing the test, T_EX expands tokens following the `\ifodd` until it obtains a sequence of tokens having the form $\langle number \rangle$, followed by a token that can't be part of $\langle number \rangle$.

Example:

```
\count255 = 19
\ifodd 5 true\else false\fi
```

produces:

```
true
```
