

## 1

`\number`  $\langle number \rangle$

This command produces the representation of a number as a sequence of character tokens. The number can be either an explicit integer, a  $\langle number \rangle$  parameter, or a  $\langle number \rangle$  register.

*Example:*

```
\number 24 \quad \count13 = -10000 \number\count13
```

*produces:*

```
24 -10000
```
