1

```
\lgroup
\rgroup
```
These commands produce large left and right parentheses that are defined
as opening and closing delimiters. The smallest available size for these
delimiters is `\Big`. If you use smaller sizes, you'll get weird characters.

Example:
```
  $$\lgroup\dots\rgroup\qquad\bigg\lgroup\dots\bigg\rgroup$$
```
produces:

$$(\ldots)\qquad\bigg\lgroup\ldots\bigg\rgroup$$
