`\copy` ⟨*register*⟩

This command produces a copy of box register ⟨*register*⟩. This command is useful when you want to retrieve the contents of a box register but don't want to destroy the contents. (Retrieving the register contents with `\box` makes the register void.)

Example:
```
  \setbox0 = \hbox{good }
  Have a \copy0 \box0 \box0 day!
```
produces:
  Have a good good day!
