`\wlog { `⟨*token list*⟩` }`

This command writes ⟨*token list*⟩ on the log file. TₑX expands ⟨*token list*⟩ according to the same rules that it uses for `\edef` (p. '`\edef`').

Example:

```
\wlog{Take two aspirins and call me in the morning.}
```

produces in the log:

```
Take two aspirins and call me in the morning.
```
