1

```
\enskip
\quad
\qquad
```

Each of these commands produces a glob of horizontal glue that can neither stretch nor shrink. TEX can break a line at such glue. The width of these glues (which are relative to the current font) are as follows for `cmr10`, the default plain TEX font:

Command	Space	Illustration
\enskip	$^1\!/_2$ em	→| |←
\quad	1 em	→| |←
\qquad	2 em	→| |←

Example:

```
  en\enskip skip; quad\quad skip; qquad\qquad skip
```

produces:

   en skip; quad   skip; qquad   skip
